

Cyber Security

All organisations rely upon effective IT systems to support their key business processes; the impact of IT systems failure is significant for most.

With Cyber becoming an ever increasing risk we have successfully developed and undertaken valuable reviews to provide our clients with a robust review of their ICT infrastructure against current cyber guidance and practices.

A Government Cyber Health Check and Cyber Security Breaches Survey stated that “nearly seven out of ten attacks involved viruses, spyware or malware that might have been prevented using the Government’s Cyber Essentials scheme”.

Cyber Essentials is a government-backed cyber security certification scheme that sets out a baseline of cyber security suitable for all organisations. The Scheme covers technical controls and we have expanded this to include the ‘human’ controls that are so vital to ensuring that organisations remain as secure as they can.

At Devon Audit Partnership we have gained a breadth of knowledge, maximising the sharing of best practices, increasing efficiencies and minimising risks. We are successfully supporting organisations in identifying areas where they can strengthen controls and reduce risks and impacts of a cyber-attack.

Our clients say:

The Audit planning process engages both parties so that we can come up with a sensible plan which covers our key risk areas and fits in with our current staff resources. I think your Audit service is excellent and I would welcome the continuing relationship with your service, keep up the good work!
